HUMAN'18

1st Workshop on Human Factors in Hypertext

In conjunction with the ACM Hypertext Conference 2018 ✳ Baltimore, Maryland, USA

July 9, 2018   **#HUMAN18**   `http://human.iisys.de/human18`

❧ Introduction

HUMAN'18 is the first workshop of a new series for the ACM Hypertext conferences. It has a strong focus on the user and thus is complementary to the strong machine analytics research direction that could be experienced in previous conferences.

The user-centric view on hypertext not only includes user interfaces and interaction, but also discussions about hypertext application domains. Furthermore, the workshop raises the question of how original hypertext ideas (e.g., Doug Engelbart's "augmenting human intellect" or Frank Halasz' "hypertext as a medium for thinking and communication") can improve today's hypertext systems.

❧ Scope

Historically, hypertext is strongly connected to human factors. This can be experienced by the early work provided by hypertext pioneers, such as Doug Engelbart or Ted Nelson. However, recent hypertext research focuses mostly on machine analytics. This workshop wants to broaden the scope again by taking the human back into consideration. In order to accomplish that, the workshop combines original hypertext ideas with recent hypertext research trends. Furthermore, it tries to consolidate different hypertext areas by looking at those from a human factors viewpoint.

HUMAN also encourages to submit work that has an interdisciplinary perspective. It targets both scientists and developers from various research and business areas who consider a critical and open-minded discussion of original hypertext ideas with the goal to identify and solve today's hypertext challenges.

Relevant topics include (but are not limited to):

- Systems for augmenting human intellect
- User-centric hypertext systems
- User interfaces and interactions
- Cognitive aspects and hypertext
- Collaboration and hypertext
- Information structuring
- Hypertext used for human communication
- Hypertext and decision making
- Spatial hypertext
- Annotation services
- Organizing information
- Information structuring in digital humanities
- User perspectives in adaptive hypertext
- Social aspects of humans using hypertext
- Intercultural aspects in hypertext

Organizers

Prof. Dr. Claus Atzenbeck
Institute of Information Systems
Hof University, Germany
claus.atzenbeck@iisys.de

Prof. Dr. Jessica Rubart
OWL University of Applied
Sciences, Germany
jessica.rubart@hs-owl.de

❧ Submission

All papers must be original and may not not published, submitted, and/or currently under review elsewhere. Each submission will be peer reviewed in a double-blind manner.

Papers must follow the new layout published in the ACM guidelines ("sigconf" template) and submitted in PDF format (short papers: 2–4 pages; long papers: 5–10 pages).
Submissions must be emailed to the organizers no later than April 10 at 23:59 (UTC−12).

All accepted and at the workshop presented papers will be published at the ACM Digital Library.

❧ Important Dates

April 10, 2018
Submission deadline

May 8, 2018
Notification of acceptance

May 19, 2018
Camera ready papers due

July 9, 2018
Workshop

March 2018 — April — May — June — July — August
